Introducing the New Pirate Wire Eye Carabiner from Rock Exotica USA

The wire hinge pin creates a 'captive eye' which prevents dangerous misalignment and cross-loading. The automatic triple-action gate is resistant to vibration energy and also user inadvertence.

Ordinary screw-gate style carabiners are susceptible to misalignment and cross-loading. Also, the screw mechanism can unwind. A further complication is the fact that it relies on the diligence of the user to remember to screw the gate to its locked position!
